PRODEVAL OPENS ITS SUBSIDIARY IN SPAIN AND CONFIRMS ITS AMBITION TO DEPLOY ITS BIOMETHANE PRODUCTION SOLUTIONS

SPAIN'S AMBITION IS TO ACHIEVE CARBON NEUTRALITY BY 2050 BY DEVELOPING THE PRODUCTION OF RENEWABLE ENERGY, INCLUDING BIOMETHANE.

In 2020, Spain had 210 Biogas production plants and only 2 active Biomethane production plants. Today, the number of Biomethane production plants has risen to 6, of which 5 are injecting Biomethane into the gas grid, which represents only a small share of the production of renewable energy. However the market is growing thanks to the new Biogas development strategy, validated by the Council of Ministers in April 2022.

Spain is currently the **4th European country with the greatest potential for Biomethane production** and could exceed **100 TWh** of production per year¹.

PRODEVAL now has more than 350 Biomethane production plants in 10 countries and, with the opening of its subsidiary in Spain, confirms its ambition to develop itself locally in order to provide innovative solutions to reduce greenhouse gases and CO₂ emissions in all territories.

With the prospect of a growing market, **PRODEVAL** chose to set up its subsidiary in **Zaragoza** in March, to be closer to its customers. Business development is entrusted to **Nicolas BRUYAS**, Business Developer since 2019 at **PRODEVAL**, on the territories of Spain, Portugal and South America. Currently, many projects are under development in Spain.

Sébastien PAOLOZZI - CEO of PRODEVAL

« The opening of this new subsidiary is a concrete response to a growing market to develop the share of Biomethane in the Spanish production of renewable energies. Today, we are able to quickly deploy our solutions in this territory, thanks to a strong production capacity and efficient operational services.

Nicolas BRUYAS has a solid experience and know-how in the field of Biogas which gives him a real asset to take up this new challenge. »

PRODEVAL

Leader and key player in Biogas treatment and upgrading, PRODEVAL has improved its skills over the last three decades to provide its customers with Biomethane production and distribution solutions, CNG, LNG, CO₂ recovery and a full range of dedicated services. The company follows a strong and dynamic will, dedicated to the energy transition and the fight against global warming. Driven by strong convictions, it actively participates to the reduction of greenhouse gases, through Biogas and BioCNG solutions increasingly innovative, responsible and adapted to environmental aspirations. Present in a dozen countries around the world through its 6 subsidiaries, the company now has more than 350 installations in operation and has achieved a turnover of 135M€ in 2022.
